wim/wim file has the required files, particularly boot.wim and msixec.exe. 3. Insert WinPE and press "Install from Install CD..." 4. Select "Install from a different CD/DVD", and browse to the Windows\XPI folder on the USB. Make sure there is a boot.wim in the root of the USB. 5. Press "Install now..." 6. Wait for the installation to complete and boot into Windows XP. 7. Press "Windows" on the WinPE prompt, and the option "Deploy from a network share" will appear. This is the option to use to install your custom copy of Windows XP. To view the installation progress after completing the installation process, right-click on the Windows XP desktop icon and select "Open." Your Windows XP will open in normal mode, with a blue desktop and the icons shown in Figure 12-23. Figure 12-23. Windows XP installation screen Figure 12-23 9. When Windows XP boots for the first time, the next option in the boot sequence is Install from a network share. Go back to Step 5 and repeat the process to create a custom-built installation of Windows XP. 10. After rebooting, the next option in the boot sequence is Advanced Boot Options. Press Enter to boot into Windows XP, and select the option Boot from local hard disk. 11. Windows XP will boot and load the hardware drivers. If the following message appears, your hardware drivers are not installed: "The software for this device is not installed or can't be loaded." It may be possible that Windows XP isn't recognizing the device. To fix this problem, follow these steps: 1. Boot into Windows XP by pressing "Windows" on the WinPE prompt. 2. Right-click on the Windows XP desktop icon and select "Properties" 3. Choose "Hardware" in the "Device Manager" list on the left. If your device is listed in the Device Manager, right 82157476af
